

# Packaging Policy

Nestlé is committed to reducing the environmental impact of packaging, without jeopardising the safety, quality or consumer acceptance of its products. It is Nestlé's objective to develop safe and wholesome packaged foods using the most efficient and appropriate packaging materials available, while, at the same time, satisfying consumer requirements and expectations.

Nestlé seeks packaging solutions that:

- Result in the lowest possible weight and volume of packages and optimise efficiencies in transport and distribution.
- Take into account new packaging materials and processes that reduce the impact on the environment.
- Avoid the use of substances that can adversely impact the environment during packaging production, recovery, and disposal.
- Decrease packaging waste at all stages, including package manufacturing, distribution, utilisation and disposal.
- Increase the use of recycled materials wherever possible.
- Increase the recycleability and compatibility of its packages with existing waste management schemes.
- Ensure consumers are aware of the correct recovery and disposal options for the packaging of Nestlé products.
